

WHAT IS CLAIMED IS:

1. An asymmetric porous polytetrafluoroethylene membrane for clothing comprising a dense skin layer and a continuously foamed
5 porous layer, wherein
 - (1) the contact angle of water to the surface of said skin layer is 120 to 140°; and
 - (2) the diffuse reflectance of light of said skin layer is 91 to 94 %.
- 10 2. The asymmetric porous polytetrafluoroethylene membrane for clothing of Claim 1, which is obtained by drawing in a biaxial direction.
- 15 3. The asymmetric porous polytetrafluoroethylene membrane for clothing of Claim 1 or 2, which has a membrane thickness of 10 to 100 µm.
- 20 4. A material for clothing comprising the asymmetric porous polytetrafluoroethylene membrane for clothing of Claim 1 and a woven or non-woven fabric.
5. The material for clothing of Claim 4, wherein said woven fabric is polyester, nylon or cotton.
